

Session – 5

Q1. Create two tables in SQL: influencers (with influencer_id as PRIMARY KEY and name) and posts (with post_id as PRIMARY KEY, influencer_id as FOREIGN KEY, and caption). Insert at least 3 influencers and 2 posts for each influencer.

The screenshot displays the MySQL Workbench interface. The left sidebar shows the 'SCHEMAS' tree with a filter for 'influencers'. The main editor window contains the following SQL code:

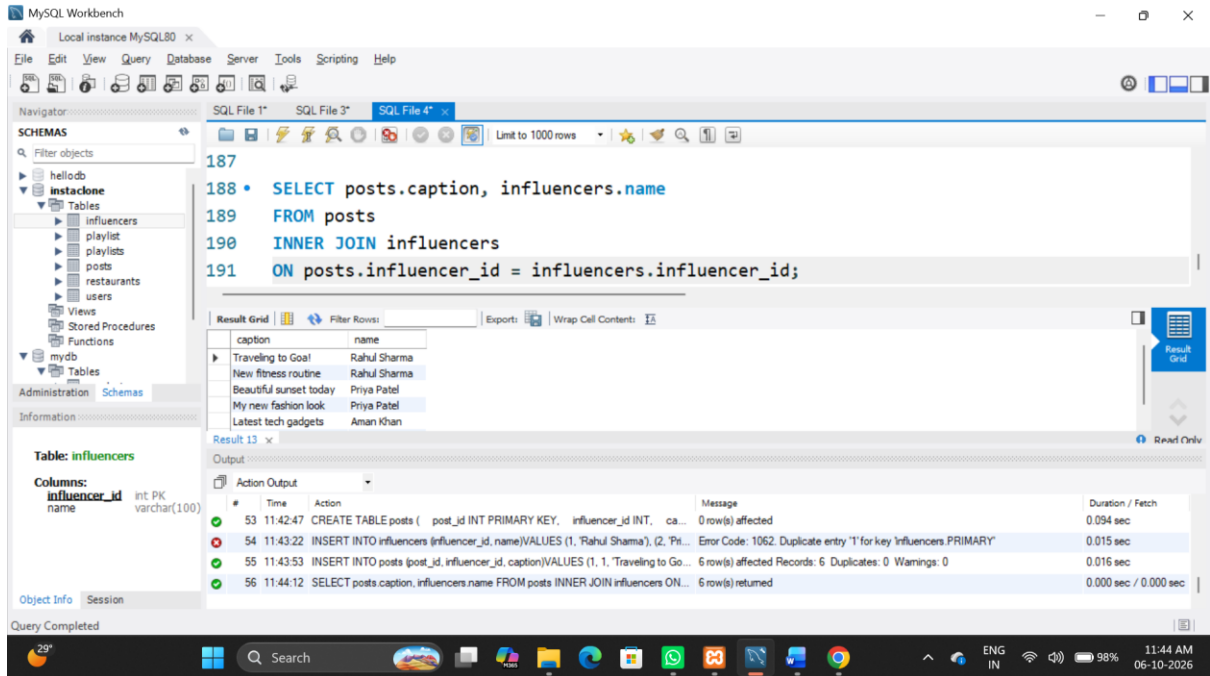

```
128 (2, 'Priya Patel'),
129 (3, 'Aman Khan');
130
131 • INSERT INTO posts (post_id, influencer_id, caption)VALUES
132 (1, 1, 'Traveling to Goa!'),
133 (2, 1, 'New fitness routine'),
134 (3, 2, 'Beautiful sunset today'),
135 (4, 2, 'My new fashion look'),
136 (5, 3, 'Latest tech gadgets'),
137 (6, 3, 'Coding and coffee');
```

The bottom panel shows the 'Output' tab with the following results:

#	Time	Action	Message	Duration / Fetch
39	11:31:11	INSERT INTO influencers (influencer_id, name) VALUES (1, 'Rahul Shama'), (2, 'Priya Patel'), (3, 'Aman Khan');	3 row(s) affected Records: 3 Duplicates: 0 Warnings: 0	0.000 sec
40	11:31:51	INSERT INTO posts (post_id, influencer_id, caption)VALUES (1, 1, 'Traveling to Goa!'), (2, 1, 'New fitness routine'), (3, 2, 'Beautiful sunset today'), (4, 2, 'My new fashion look'), (5, 3, 'Latest tech gadgets'), (6, 3, 'Coding and coffee');	Error Code: 1054. Unknown column 'influencer_id' in field list	0.000 sec
41	11:33:02	INSERT INTO posts (post_id, influencer_id, caption)VALUES (1, 1, 'Traveling to Goa!'), (2, 1, 'New fitness routine'), (3, 2, 'Beautiful sunset today'), (4, 2, 'My new fashion look'), (5, 3, 'Latest tech gadgets'), (6, 3, 'Coding and coffee');	Error Code: 1054. Unknown column 'influencer_id' in field list	0.000 sec
42	11:33:15	INSERT INTO posts (post_id, influencer_id, caption)VALUES (1, 1, 'Traveling to Goa!'), (2, 1, 'New fitness routine'), (3, 2, 'Beautiful sunset today'), (4, 2, 'My new fashion look'), (5, 3, 'Latest tech gadgets'), (6, 3, 'Coding and coffee');	Error Code: 1054. Unknown column 'influencer_id' in field list	0.000 sec

The status bar at the bottom indicates 'Query interrupted'.

Q2. Write an SQL query using INNER JOIN to display each post's caption along with the name of the influencer who posted it, based on the tables you created.

The screenshot shows the MySQL Workbench interface. The SQL editor contains the following query:

```
187
188 • SELECT posts.caption, influencers.name
189 FROM posts
190 INNER JOIN influencers
191 ON posts.influencer_id = influencers.influencer_id;
```

The Result Grid displays the following data:

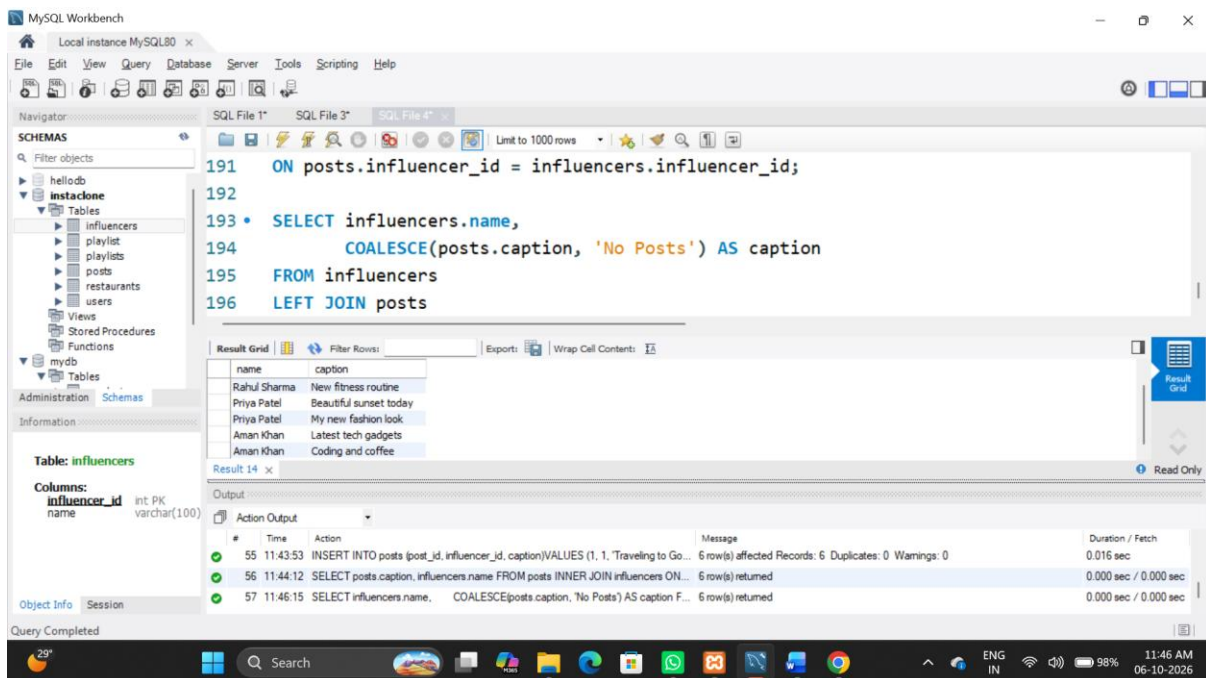

caption	name
Traveling to Goa!	Rahul Sharma
New fitness routine	Rahul Sharma
Beautiful sunset today	Priya Patel
My new fashion look	Priya Patel
Latest tech gadgets	Aman Khan

The Action Output pane shows the following log entries:

#	Time	Action	Message	Duration / Fetch
53	11:42:47	CREATE TABLE posts (post_id INT PRIMARY KEY, influencer_id INT, ca...	0 row(s) affected	0.094 sec
54	11:43:22	INSERT INTO influencers (influencer_id, name)VALUES (1, 'Rahul Shama'), (2, 'Pri...	Error Code: 1062. Duplicate entry '1' for key 'influencers PRIMARY'	0.015 sec
55	11:43:53	INSERT INTO posts (post_id, influencer_id, caption)VALUES (1, 1, 'Traveling to Go...	6 row(s) affected Records: 6 Duplicates: 0 Warnings: 0	0.016 sec
56	11:44:12	SELECT posts.caption, influencers.name FROM posts INNER JOIN influencers ON...	6 row(s) returned	0.000 sec / 0.000 sec

Q3. Write an SQL query using LEFT JOIN to show all influencers and their posts, including influencers who haven't posted anything yet. If an influencer has no posts, display 'No Posts' in the caption column.

Hint: Use IFNULL or COALESCE to handle NULL values in the result.

The screenshot shows the MySQL Workbench interface. The SQL editor contains the following query:

```
191 ON posts.influencer_id = influencers.influencer_id;
192
193 • SELECT influencers.name,
194       COALESCE(posts.caption, 'No Posts') AS caption
195 FROM influencers
196 LEFT JOIN posts
```

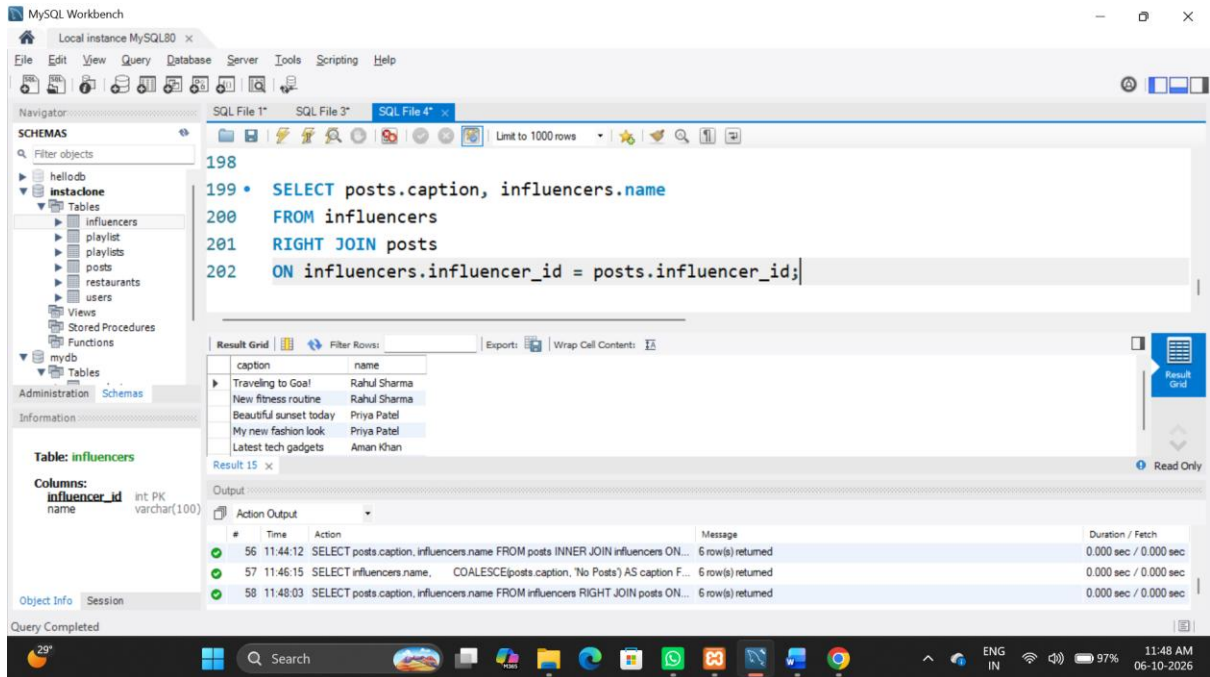

The Result Grid displays the following data:

name	caption
Rahul Sharma	New fitness routine
Priya Patel	Beautiful sunset today
Priya Patel	My new fashion look
Aman Khan	Latest tech gadgets
Aman Khan	Coding and coffee

The Output tab shows the execution log:

#	Time	Action	Message	Duration / Fetch
55	11:43:53	INSERT INTO posts (post_id, influencer_id, caption) VALUES (1, 1, 'Traveling to Go...)	6 row(s) affected Records: 6 Duplicates: 0 Warnings: 0	0.016 sec
56	11:44:12	SELECT posts.caption, influencers.name FROM posts INNER JOIN influencers ON...	6 row(s) returned	0.000 sec / 0.000 sec
57	11:46:15	SELECT influencers.name, COALESCE(posts.caption, 'No Posts') AS caption F...	6 row(s) returned	0.000 sec / 0.000 sec

Q4. Write an SQL query using RIGHT JOIN to list all posts and the corresponding influencer's name, ensuring that even posts without a matching influencer_id (if any) are shown.

The screenshot shows the MySQL Workbench interface. The SQL Editor contains the following query:

```
198
199 * SELECT posts.caption, influencers.name
200 FROM influencers
201 RIGHT JOIN posts
202 ON influencers.influencer_id = posts.influencer_id;
```

The Results window displays the output of the query, showing a table with two columns: caption and name. The data is as follows:

caption	name
Traveling to Goa!	Rahul Sharma
New fitness routine	Rahul Sharma
Beautiful sunset today	Priya Patel
My new fashion look	Priya Patel
Latest tech gadgets	Aman Khan

The bottom of the screenshot shows the Windows taskbar with the system clock at 11:48 AM on 06-10-2026.
